Forward Deployed Engineer with 5+ years at Microsoft and Salesforce shipping production systems for billions of users, plus hands-on agentic AI work. Comfortable owning customer outcomes end-to-end - mapping messy enterprise processes, integrating with existing systems, and standing up reliable, **evaluated LLM/agent workflows** (tools, planning, state/memory).

EXPERIENCE

Stealth Startup — Forward Deployed Engineer

May 2026 - Present

- Served as sole FDE on an AI claims automation pilot for a major healthcare payer, replacing an offshore data-entry vendor by reading scanned insurance claim forms and generating the fixed-width load files required by the payer's legacy claims system.
- Developed an **image-to-data pipeline** on Claude (Amazon Bedrock) using vision extraction with automated feedback, codified payer business rules, and implemented a member and provider resolution process over the claims database. Achieved **96% field-level accuracy** on batches of **2,100 claims**, within two percentage points of the human vendor.
- Delivered a **FastAPI/SPA reviewer dashboard** to streamline claim audits. Implemented end-to-end field tracing, byte-level vendor comparisons, and an approval workflow requiring clear escalation reasons and defined next steps for held claims.
- Enforced the PHI boundary end-to-end (**Bedrock under AWS BAA**; PHI never in git, logs, or on a public port)

California State University — Graduate Research Assistant

Sept 2025 - May 2026

- Developed VOICE-GuardEval, a **severity-aware evaluation framework for voice agents** (Evals, TTS/ASR) that grades action correctness, clarification, confirmation, and cancellation handling across a 139-case suite. Led an iterative evaluation process that increased task success from 69% to approximately 95% and reduced severe failures to 1%.

Microsoft — Product Manager 2, [Purview \(Data Lifecycle Management\)](#)

Dec 2023 – Jan 2025

- Built a **Customer Support Agent** for a compliance platform protecting 317M monthly users and receiving 5K+ tickets and 500+ escalations/month, cutting time-in-escalation by 22% and total tickets by 30% via agentic workflows (surfacing relevant public documentation and support articles, suggesting resolution scripts directly in the ticket for support engineers to run in the customer environment, and routing escalations to the right engineers).
- Unblocked **\$7M+ in sales deals** with **Fortune 500 financial clients** by designing and delivering key regulatory-compliance capabilities, including SEC 17a-4 deletion audit features.
- Served as **Forward Deployed Engineer** for features requested by **350+ enterprise customers**, translating ambiguous customer requirements into detailed specs and driving them to shipped capabilities (retention-modification and auto-labeling, Microsoft Graph APIs for Labels and File Plan Descriptors).

Microsoft — Software Engineer II, [Meeting Insights](#)

Mar 2022 – Dec 2023

- Integrated **LLM summarization and intent extraction (Azure OpenAI)** with prompt templates, **hallucination detection**, **PII scanning**, and **quality tracking**, applying evaluation and guardrails to LLM output in production.
- Built multi-source ingestion and ranking pipelines (documents, email, meetings, chat) with chunking, hybrid indexing, and multi-tier caching to power **low-latency semantic search at scale**.
- Cut service memory footprint **~25%** via heap-dump profiling and data-structure redesign, improving throughput and stability under high-scale load.

Microsoft — Software Engineer, [Windows 11 Voice Access](#)

Dec 2020 – Feb 2022

- Led the Voice Access first-run experience (C++, Windows Speech Platform, UI Automation) with intent recognition and app-state grounding, **shipping to 1B+ devices**; delivered a WCAG 2.1 AA-compliant, accessible UI framework.

Salesforce — Member of Technical Staff, [Marketing Cloud](#)

Jun 2019 – Dec 2020

- Built REST APIs and orchestration tooling (.NET) to automate large-scale patching and decommissioning across **~6K servers**, **cutting a 6-day manual process to seconds**.
- Implemented **GDPR-compliant solutions**, **RBAC**, and self-serve workflows enabling non-technical ops teams to manage infrastructure across US and EU regions.

SKILLS

Agentic AI & LLMs: Multi-agent systems (LangGraph, CrewAI, AutoGen), MCP, tool/function calling, RAG, vector search, embeddings, prompt engineering, LLM/agent evaluation, LoRA fine-tuning, observability/tracing

Languages: Python, JavaScript, C#, C++, Java, Go, SQL

Backend & Systems: FastAPI, Flask, REST, Node.js, Spring Boot, Snowflake, Databricks, MongoDB, Redis, Vector DBs

Cloud & Reliability: Azure, AWS (Bedrock, S3, Lambda, SQS, Step Functions, Transfer Family, EC2, SSM, Cognito), Docker, CI/CD

EDUCATION

California State University, Long Beach — M.S., Computer Science (GPA 4.00/4.00)

Motilal Nehru National Institute of Technology — B.Tech., Computer Science & Engineering (GPA 3.89/4.00)
